Newly Discovered Dunhuang Fragments of *Śatasāhasrikā Prajñāpāramitā* in the Collection of the IOM, RAS¹

DOI 10.17816/wmo34955

Abstract: the paper presents eleven fragments of *Śatasāhasrikā Prajñāpāramitā* identified during analysis of the Tibetan texts from Khara-khoto kept in the IOM, RAS. In 2019 as an intermediate result of a project ‘Compilation of the Catalogue of the Tibetan texts from Khara-Khoto preserved at the Institute of Oriental Manuscripts, RAS’ being done by researchers of the Institute thirty-three fragments that had been added to Khara-khoto collection by mistake, were transferred to a separate collection of Tibetan texts from Dunhuang. Although the edited fragments of *Śatasāhasrikā Prajñāpāramitā* cannot be considered to be unique they are worth studying in terms of codicology.

Key words: Tibetan manuscripts from Dunhuang, Tibetan Buddhist texts, Khara-Khoto collection, *Śatasāhasrikā Prajñāpāramitā*

Being a part of the manuscript holdings of the Institute of Oriental manuscripts, RAS, Tibetan texts from Dunhuang are kept as a separate collection under call numbers *Дх.Тиб.* (abbreviation for ‘Dunhuang Tibetan’). The majority of the texts included in this collection are well-known thanks to the catalogue edited by L.S. Savitskii² and several publications made by M.I. Vorobiova-Desiatovskaia,³ A.V. Zorin⁴ and K. Iwao.⁵ Meanwhile, a new research project carried out by A. Zorin, A. Sizova and A. Turanskaya has revealed that

⁵ IWAO 2011.

some Tibetan texts preserved in the Khara-khoto collection are of Dunhuang origin.⁶

This consumption is rather plausible concerning the fact that Tibetan texts found in the Big Mound hoard in the Tangut (Tib. Mi nyag, Chinese Xi xia 西夏) fortified town of Khara-khoto and kept in St. Petersburg have not been properly sorted and arranged until recently.⁷ It is known that the Tibetan books were transferred to the Asiatic Museum (now the IOM, RAS) on May 3 (April 20, according to the Gregorian Calendar), 1911. Dunhuang and other Central Asian collections were partly mixed up during the Soviet time, and in the late 1960s it was not an easy task to identify Tibetan texts from Khara-khoto when the separate collection was first formed. By 1970, 70 book fragments acquired code XT (abbreviation for “Хара-хото, Тибетский” (Khara-khoto, Tibetan). Later the collection of Tibetan texts was enlarged and, by 2018, included 194 call numbers.⁸ As a result of collection preliminary study in the framework of the above mentioned project, it became clear that thirty-three items from Dunhuang had been transferred to Khara-Khoto collection of Tibetan texts by mistake. In 2019 they were returned to the collection of Tibetan texts from Dunhuang and obtained new call numbers⁹:

⁶ Hypothetically speaking, these book fragments could be found in Khara-khoto as it is well-known that manuscripts produced in Dunhuang were distributed to other places (IWAO 2012, 104). However, as Dunhuang manuscript fragments are not found in the Stein’s collection of Tibetan books from Khara-khoto preserved in the British library, this speculation is rather unlikely.

⁷ This fact was indicated in VOROBIOVA-DESIATOVSKAIA 1995, 46; TAKEUCHI 2016, 323; ZORIN, SIZOVA 2019.

⁸ History of the collection is provided in ZORIN, SIZOVA 2019.

⁹ More details in ZORIN, SIZOVA 2019.

These items are variegated in terms of writing style and contents and include

- canonical (i.e. found in the *Bka' 'gyur* (*Prajñāpāramitā* cycle *Дх. Тиб.222; Дх. Тиб.224; Дх. Тиб.236; Дх. Тиб.225; Дх. Тиб.226; Дх. Тиб.227; Дх. Тиб.229; Дх. Тиб.239; Дх. Тиб.248; Дх. Тиб.251; Дх. Тиб.252* and other texts *Дх. Тиб.230; Дх. Тиб.235; Дх. Тиб.238; Дх. Тиб.247*) and *Bstan 'gyur* (*Дх. Тиб.249; Дх. Тиб.250*),
- other Buddhist texts (*Дх. Тиб.231; Дх. Тиб.233; Дх. Тиб.237; Дх. Тиб.241; Дх. Тиб.243; Дх. Тиб.244; Дх. Тиб.253; Дх. Тиб.254; Дх. Тиб.232*),
- several fragments of documents (*Дх. Тиб.223*,¹⁰ *Дх. Тиб.228; Дх. Тиб.245; Дх. Тиб.246*) and *glegs tshas* covers (*Дх. Тиб.234; Дх. Тиб.240; Дх. Тиб.242*¹¹).

The present article deals with eleven fragments of the canonical text *Śatasāhasrikā Prajñāpāramitā* kept under call numbers *Дх. Тиб.222, Дх. Тиб.224, Дх. Тиб.236, Дх. Тиб.225, Дх. Тиб.226, Дх. Тиб.227, Дх. Тиб.239, Дх. Тиб.248, Дх. Тиб.251* and *Дх. Тиб.252*.

It is well known that the established scriptorium in Tibetan-ruled Dunhuang (786–848) was engaged in the ambiguous project of copying various Buddhist texts in both Tibetan and Chinese languages on behalf of the Tibetan emperor.¹² *Aparimitāyurjñāna Sūtra* and *Śatasāhasrikā Prajñāpāramitā Sūtra* in Tibetan were copied to such a great extent that they comprised a larger part of the Tibetan Dunhuang manuscripts. According to numerous previous studies, *Śatasāhasrikā Prajñāpāramitā* was vastly copied during the reign of the Tibetan king *Khri gtsug lde btsan* (815–841). According to S. van Schaik, about 14,000 sheets of *Śatasāhasrikā Prajñāpāramitā Sūtra* in *pothī* format are preserved nowadays in world manuscript holdings.¹³ The roll-type¹⁴ copies are not rare either. Thus, the above-mentioned fragments of *Śatasāhasrikā Prajñāpāramitā Sūtra* do not seem much promising for the researchers of Tibetan history and culture. However, their edition and further study can be useful in codicological and paleographical aspects.

¹⁰ The edition of the fragment is presented in TAKEUCHI 1995.

¹¹ The fragment is mentioned in TAKEUCHI 2013, 103.

¹² IWAO 2013, 111.

¹³ VAN SCHAIK 2002, 133–134.

¹⁴ This term is used to indicate a variation of a scroll, oriented horizontally IWAO 2013; DOTSON, HELMAN-WAŻNY 2016, 36.

The fragments are parts of nine different rolls. Full dimensions and completeness of the latter remain unknown as fragments are too small to speculate. However, the textual collation gives enough evidence to suppose that the text columns and, thus, paper panels which were attached together with adhesive, differed in length.¹⁵

The writing style of these Tibetan fragments is *dbu can* that contains several features of Old Tibetan writing such as reverse *gi gu*, *da drag*, *ma ya btags*, medial '*a*' (e.g. *bka*'s), '*a rten*' (e.g. *pa*'), which are common for Dunhuang manuscripts. Particles '*i*' and '*o*' (with the letter '*a* chung) are quite often separated from the preceding syllables with the *tsheg* sign (e.g. *bcu* '*i*', *bya* '*o*', etc.). A special ligature for the combination *sp-* (as in *spyod* or *spong*, etc.) is used, it is similar to the one used in *dbu med* script.

The ductus of all fragments is alike (except for *Dx. Tiб.227*, *Dx. Tiб.239*) and renders so-called ‘*utra style*’¹⁶ with minor specific features that allows to suppose that the manuscripts were produced in the same scriptorium.¹⁷ *Dx. Tiб.227*, *Dx. Tiб.239* are more likely to be written in ‘square style’.¹⁸ Paleographical features clearly indicate that the Tibetan manuscripts were carefully prepared and written. The handwritings are neat and legible while corrections and corrector’s interpolations into the main text are minor. They are inserted into the texts by ‘+’ sign.

The codicological description and edition of the fragments are presented below. The fragments are identified with relevant places in the later canonical Derge edition (D), thanks to the search tool available at the web site of the Buddhist Digital Research Center (BDRC). The Derge edition was also used to fill the lacunae found in the fragments although the original texts must have had certain differences.

¹⁵ Each paper panel has two or three columns, in which Tibetan text is written horizontally. The roll-type *Śatasāhasrikā Prajñāpāramitā* sūtras from Dunhuang are produced on panels which are ca. 27.5 cm high and have 15 to 19 lines per column (DOTSON, HELMAN-WAŻNY 2016, 63).

¹⁶ This style is rather typical for Dunhuang documents and was used by scribes to write Buddhist texts at some speed while retaining legibility. A more detailed description is found in VAN SCHAIK 2013, 122–123; VAN SCHAIK 2014, 309–312.

¹⁷ For the ductus of the five fragments a reduction of strokes and pen-lifts is typical. The head of *ga* and *kha* is triangle in shape; *ba* is triangle with flat head stroke; '*a* in the majority of cases is written without ‘tail-stroke’ on the bottom right.

¹⁸ The square style appears in several documents from the library cave at Dunhuang and is often dated back to the late eighth and mid-ninth centuries (VAN SCHAIK 2014, 309). The preserved text of the fragment includes all specifications typical for this style: *ta* shows similarity with Brāhmī *ṭa*; diagonal line extends across the whole letter *pha*, from right top tip to bottom left corner; *ba* in square shape; *la* has long flat “head” on right vertical.

The edition uses a system developed by A. Zorin for the project.¹⁹ Texts of the fragments are given in bold type, the lacunae being put in the angle brackets and marked with italics. Crossed syllables are put in quotation marks " ". Interpolations that could be considered scribe's or corrector's corrections are given in curly brackets. Special Tibetan letters and signs used for rendering of Sanskrit words and syllables are transliterated with use of diacritics — ā, ī, m̄, h̄, etc. The reverse *gi* *gu* sign is marked with a capital *I*. The · and : signs render *tsheg* and double *tsheg* signs²⁰ correspondingly. Intervals between words and *shad* (|) signs are rendered with underscores. Marked margins are indicated by sign !.

1. *Дх. Тиб.222* (XT 2)²¹

Fragment. 17.2×16.8 cm.

'Woven', one-layered, medium thick paper of light brownish colour. Verso is blank. Guidelines by drypoint (1.5 cm).

Tears, creases, holes, surface grim.
